Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • Which crop is best suited for my soil and climate conditions? • I want to increase my crop yield and profit. • I need accurate recommendations for better farming decisions.	THINKS • Am I selecting the right crop for this season? • How can I reduce fertilizer and water wastage? • Will changing weather conditions affect my crop productivity?
PERSONA NAME (Role / User Type) Ramesh Kumar (Farmer)	
DOES • Tests soil nutrients such as Nitrogen (N), Phosphorous (P), and Potassium (K). • Monitors temperature, humidity, pH, and rainfall conditions. • Consults agricultural experts and online resources before cultivation.	FEELS • Concerned about low crop yields and financial losses. • Confused by varying environmental and soil conditions. • Hopeful that technology can help improve productivity and sustainability.
