Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
	External Entity (Farmer / User)	The farmer (user) interacts with the system by providing input data and receives crop recommendations and results. (e.g., Farmer/User)
	Process (Crop Recommendation Engine)	An activity that processes the input data (N, P, K, Temperature, Humidity, pH, Rainfall) to analyze and generate the most suitable crop recommendation.
	Data Store (Crop Dataset)	A repository where agricultural data is stored for future use, such as crop information, soil nutrient data, and environmental conditions.
	Data Flow (Information Flow)	The movement of data between the farmer, processes, and data stores, labeled with information such as input data or recommended crop.

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
